SUMMARY

Senior Software Engineering student at the University of Jeddah with a 4.65/5.00 GPA and Academic Excellence recognition across four completed academic years. Co-author of a published IEEE/ACM ASE 2026 research paper and AI Team Lead for RepoCare, where I design and build hybrid RAG, LLM integration, retrieval, evaluation, and AI safety systems integrated with a Spring Boot backend. Hands-on work across backend development, full-stack mobile development, responsive web development and UI/UX, databases, software architecture, requirements engineering, and system design. Seeking a full-semester Co-op from January to June 2027.

EDUCATION

University of Jeddah — Saudi Arabia
Bachelor of Software Engineering — GPA: **4.65/5.00**
Expected Graduation: **June 2027**
Academic Excellence Recognition for each of the four completed academic years

RESEARCH

VidSumEval: A Web Platform and Benchmark for Evaluating AI-Generated Programming Video Summaries
Co-author — IEEE/ACM ASE 2026 — Published 2026 — DOI: 10.1145/3832783.3834594

- Contributed end-to-end from literature review and study design to summarization experiments, quiz development, participant data collection, evaluation, and analysis.
- Led implementation of the VidSumEval platform and benchmark workflow using Node.js, Express.js, SQLite, HTML, CSS, and JavaScript, supporting 10 tutorials, 20 AI-generated summaries, 50 comprehension questions, 20 study participants, and the evaluation process.

PROJECTS

RepoCare – Graduation Project — AI Team Lead — 2026–Present

- Lead the AI team for a smart healthcare mobile platform integrating medical reports, health sensor data, and an AI assistant; coordinate AI integration with the Spring Boot backend and wider system architecture.
- Architected a hybrid RAG system separating deterministic retrieval of processed user health data from semantic retrieval of curated medical knowledge using Gemini embeddings and Firestore Vector Search.
- Built a multi-provider AI pipeline using Anthropic Claude for generation and Gemini for embeddings, with grounded context construction, evidence selection, structured output validation, privacy boundaries, and hallucination guardrails.
- Engineered and evaluated a 40K+ chunk medical knowledge pipeline with structure-aware chunking, resumable bulk indexing, blue-green knowledge-base migration, vector reuse, retrieval benchmarks, and AI regression testing.

QnuniApp – Android Legal Case Management Application

- Worked across full-stack mobile development, building an Android legal case management app with Java/XML and Firebase for case follow-up, lawyer-client communication, real-time data, storage, and backend services.
- Designed and implemented real-time chat using Firebase Realtime Database and Firebase Storage, supporting instant messaging, conversation history, file sharing, and live case-status updates.

Smart Outing Planner – Web Application

- Designed the complete UI/UX in Figma and Sketch and built the responsive frontend end-to-end with HTML, CSS, and JavaScript, including multi-page navigation, authentication, saved plans, and activity refinement.
- Implemented Arabic/English support and integrated the frontend with backend APIs and application data for plan generation and core user interactions.

Core Software Engineering Coursework Projects
BizCo System – Software Architecture Course Project: Applied architecture methods to a multi-branch brokerage case study by identifying architecturally significant requirements, prioritizing quality attributes, designing a message-driven integration architecture, and evaluating architectural trade-offs.
Municipal Councils E-Voting System – Requirements Engineering Course Project: Applied requirements engineering to a Saudi e-voting case study integrated with NAFATH by analyzing stakeholders and business rules, defining functional/non-functional requirements and use cases, and building a traceability matrix.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python
Backend & APIs: Spring Boot, Node.js, Express.js, REST APIs
Databases & Data: SQL, SQLite, Firestore, Firebase Realtime DB
Web & Mobile Development: HTML5, CSS3, XML, Android SDK, Responsive Web Design
Architecture & Design: Software Architecture, System Design, OOP, Design Patterns
AI Engineering: RAG, LLM Integration, Retrieval Engineering, Embeddings, Vector Search, Multi-Provider AI Architecture, AI Guardrails
AI Evaluation & Testing: AI Evaluation, AI Regression Testing
Tools & Practices: Git, GitHub, Maven, Gradle, JUnit, Agile/Scrum

AWARDS & CERTIFICATIONS

Academic Excellence Recognition — University of Jeddah — Recognized in each of the four completed academic years
1st Place – Three-Minute Project (3MP) Competition — University of Jeddah — 2026
Agile Foundations — LinkedIn Learning — Oct 2025

LANGUAGES

Arabic: Native **English:** Upper-Intermediate
